Yoonyoung Kweon

404-324-1288 | yoonyoungkweon@gmail.com | linkedin.com/in/yoonyoungkweon | Atlanta, GA

Expected Graduation: Spring 2028

Education

Georgia Institute of Technology — Atlanta, GA
Master of Science in Computer Science, Specialization in Machine Learning — GPA: 4.0/4.0 — *Aug. 2025 – Present*
Relevant Coursework: Machine Learning, Computer Vision, Data Visualization and Analytics

Seoul National University — Seoul, South Korea
Bachelor of Arts in Aesthetics, Double Major in Information Science — *Mar. 2014 – Jun. 2021*

Professional Experience

LINE | Software Engineer — Feb. 2022 – Aug. 2026
Asian tech platform with 193M MAUs across messaging, fintech, and commerce. — *South Korea*

- Developed and launched two global consumer web services using React and TypeScript, serving **5M+ registered users** while achieving **Lighthouse Performance scores of 90+**.
- Built React and TypeScript interfaces for a cryptocurrency exchange, including **real-time trading**, margin trading, order book visualization, and banking workflows.
- Built developer-facing web tools using Next.js, including a Developer Portal, API sandbox, and wallet integration samples, enabling 20+ game studios to integrate blockchain payment and wallet services.
- Analyzed payment and transaction data using **SQL** to diagnose production issues across 100+ support requests and 20+ partner studios, reducing **issue resolution time by 40%**.
- Built and maintained reusable UI components and established component testing with Storybook and mock APIs, increasing **automated test coverage to 90%+.**
- Reduced production **deployment time by 30%** by migrating the frontend build pipeline from Webpack to Vite.

Projects

Wildlife Trafficking Data Analysis | *Python, SQL, SQLite, D3.js, REST API, Docker* — Sep. 2026 – Sep. 2026
Georgia Tech — Data & Visual Analytics

- Collected and cleaned airport and wildlife trafficking data from **REST APIs**, constructing flight networks and analyzing airport connectivity using degree centrality.
- Queried and analyzed trafficking incident data with SQLite using **joins, aggregations, indexes, views, and full-text search** to identify patterns in detection methods, arrests, fines, and sentencing.
- Developed a **D3.js visualization** of illegally trafficked species to communicate patterns in wildlife trafficking data.

Naver SWE Program | *Javascript, Express.js, MongoDB, Nginx, Docker, S3, EC2, Git* — Aug. 2021 – Dec. 2021

- Built a **full-stack cloud storage service** using JavaScript, Express.js, MongoDB, and AWS S3, developing REST APIs for file metadata management and persistent object storage.
- Implemented **zero-downtime deployments** with Docker using a blue-green deployment strategy and configured Nginx for **reverse proxying and load balancing** across application instances.
- Evaluated system scalability with JMeter by simulating 1,000 concurrent 70 MB file uploads and analyzing response-time behavior under increasing load.

Technical Skills

Languages: **TypeScript**, JavaScript, Java, C/C++, **Python**, **SQL** , HTML/CSS
Frameworks: **React**, Node.js, Next.js, Springboot, Django
Libraries: pandas, NumPy, Matplotlib, D3.js, scikit-learn, PyTorch
Databases: MySQL, MongoDB, Redis
Data & Cloud: AWS S3, AWS EC2, Docker, Nginx, Jenkins, Apache Hadoop, Apache Spark

Leadership & Engagement

Georgia Tech Career, Research & Innovation Conference | *Committee Member* — Sep. 2026 – present
